## Staying on top of GALILEO changes

May 23, 2008

Recent changes to [GALILEO](#), along with the new interface, have included the [Civil Rights Digital](#)

[Library](#) and [GreenFILE](#). Watch [here](#) for future developments.

## Librarians and Google: Working together for you behind the scenes

May 23, 2008

When you search in [Google Scholar](#), you're able to identify scholarly journal articles much easier than in the

main [Google](#) search. And have you noticed also that many of these are in "full text" (the entire article online), but

that you would have to pay for others?

The secret trick you need to know is that, if you're searching from on-campus, or if you're off-campus and go

to [Google Scholar from GALILEO](#), you will see many more Google Scholar articles in full text than you would

normally be able to access from off-campus. Articles from [EBSCOHost](#) and [JSTOR](#) are two good examples.

This is because our librarians have worked behind the scenes to directly link you from Google to the [vast number](#)

[of full e-journal articles](#) which [Henderson Library](#) has already paid for in

GALILEO. (Of course, Google Scholar

only includes a small part of all that is in [GALILEO](#).)

This is one example of how librarians work alongside Google in delivering the information you need, regardless of

the time or location. For another one, check out the [Open Worldcat](#) project (with a nifty [Facebook application](#)),

which lets you search for items in libraries worldwide, including ours, via Google.
